MEMORANDUM FOR: OC Executive Board Members

FROM:

Director of Communications

25X1

SUBJECT: Greater Utilization of Utility Equipment
Specialists

25X1

1. There may be an evolution taking place in the type of skills which our entering technicians are bringing to us and in the type of skills which these EOD technicians expect to use. Historically, we have expected technicians to represent a general purpose construction force, not only maintaining electronic equipment, but knocking holes in walls, installing conduits, and engaging in various aspects of construction trade. There are some indications that this utilization is causing disillusionment and disgruntlement among a work force that is anticipating being used primarily or exclusively in the area of skills training.

25X1

2. There are a couple of options which might be explored which could serve to eliminate this problem, if it is a problem. One would be to expand our core of Utility Equipment Specialists in broad numbers and functions, in effect using these individuals as a construction cadre. This would cause a substantial realignment in terms of numbers and grades. Another possibility would be to seek from the U.S. Navy a dedicated group of appropriately skilled SeaBees. If we were to pursue the latter course, we might be able to permanently billet such a force

25X1

3. Please think carefully upon this area of personnel utilization and be prepared to discuss it at the Executive Board
